

Module

## FileTest

FileTest implements file test operations similar to those used in `File::Stat`. The methods in FileTest are duplicated in class `File`. Rather than repeat the documentation here, we list the names of the methods and refer you to the documentation for `File` starting on page 506. FileTest appears to be a somewhat vestigial module.

The FileTest methods are as follows:

1.9 /

`blockdev?`, `chardev?`, `directory?`, `executable?`, `executable_real?`, `exist?`, `exists?`, `file?`, `grpowned?`, `identical?`, `owned?`, `pipe?`, `readable?`, `readable_real?`, `setgid?`, `setuid?`, `size`, `size?`, `socket?`, `sticky?`, `symlink?`, `world_readable?`, `world_writable?`, `writable?`, `writable_real?`, `zero?`
