

Class TrueClass < Object

The global value `true` is the only instance of class `TrueClass` and represents a logically true value in boolean expressions. The class provides operators allowing `true` to be used in logical expressions.

Instance methods

& `true & obj` → true or false

And—Returns false if *obj* is nil or false and returns true otherwise.

^ `true ^ obj` → true or false

Exclusive Or—Returns true if *obj* is nil or false and returns false otherwise.

| `true | obj` → true

Or—Returns true. Because *obj* is an argument to a method call, it is always evaluated; short-circuit evaluation is not performed in this case.

```

true | puts("or")
true || puts("logical or")

```

produces:

```

or

```
